Adapt Northern Heritage

Adapting northern cultural heritage to the environmental impacts of climate change and associated natural hazards through community engagement and informed conservation planning

Objective 1

Assessment tool and adaptation guidance

Develop procedures for risks and vulnerabilities assessments and sustainable adaptation planning of historic places and make the procedures accessible through online software

Objective 2

Demonstration case studies

Produce adaptation action plans to demonstrate how the environmental impacts of climate change and associated natural hazards can be integrated into conservation planning

Objective 3

Community network

Create a network for stakeholders concerned with the conservation of northern cultural heritage in the context of a changing climate to contribute, engage, learn and network
